Apply text watermarks to your images You can turn to this program if you need a quick way to apply text

watermarks to your images. You can adjust a series of parameters when doing so, but unfortunately you can't adjust the watermark's position by simply dragging it around. In order to apply it, you need to type the text content in the designated field and define its size, transparency, color contrast, font face, position and orientation by typing the values in the fields and clicking the corresponding radio buttons. Simple interface

Ruckzuck Watermark's interface is plain and unattractive but provides you with intuitive functions so that you can understand and operate its controls without significant efforts. The main window consists of a series of fields where you can input text or numeric values, a bunch of radio buttons and a few checkboxes. You can select the target image, begin applying the watermark and navigating to the output folder by

using the top colored buttons. Easy to install This program can be easily deployed to the target computer, as you only need to launch the installer, accept the End User License Agreement, define a destination path and follow the on-screen instructions. You can also choose whether a desktop shortcut will be created or not. The rest of the process is carried out automatically, without any additional assistance. Handy

Neutrality: The Brave New World of Digital Connectivity is a terrific primer on what's going on regarding net neutrality. Not only does the documentary give readers some

insight on the legal and economic issues surrounding the evolution of the internet from the beginning of the Internet to the launch of Google. The documentary also touches on what this new reality could mean for us as individuals, employees and citizens. If you want to know more about what net neutrality is and how it's affect our lives, I can't recommend this documentary enough. The documentary also

touches on the consolidation of some of the major content providers like Facebook. The average Facebook user now has fewer than 50 friends. Facebook has 1.79 billion active monthly users. It's estimated that about 7 percent of Facebook users spend more than four hours on the social network daily. The result of this growing network control is where this documentary becomes particularly fascinating. It's a short

documentary that hits the high points. It gives you insight on how the internet was launched and how the social media platform has evolved from a place for the elite to a level playing field for all users. The documentary touches on the implications of a platform with such control and the potential challenges that may arise.
